

# Lemongrass Polaris Program Helps Enterprises Move Their SAP Systems to Amazon Web Services

## A new SAP Migration program, backed by funding support and automation-enabled services, unlocks migrate & RUN acceleration for SAP-Centric workloads on Amazon Web Services

The conversations around cloud-enabled technology and its benefit to large enterprises are no longer about if you should migrate your SAP systems, but rather when you should. The Lemongrass Polaris Program includes funding options bundled with a suite of automation-enabled Migration services orchestrated through Lemongrass's proven SAP methodology.

This program provides not only the experience, methodology and technical tooling for a successful migration, but also the funding support, which is compelling on all fronts.

The Polaris migration program has been specifically designed to help SAP enabled companies meet modern business requirements. The program includes:

- SAP systems migrations into AWS with minimal downtime leveraging Lemongrass's automation-enabled migration pattern technologies.
- The potential to reduce platform costs by 33% through funding incentives. This program is open to new customers with platform spend in excess of \$100k per year.
- Lemongrass's Automation Management Platform and its set of purpose-built tools to facilitate the migration process and support on-going innovation

and automation of the resulting environments.

This automation includes a full suite of migration, build and steady state-run services, self-service deployments, and self-healing capabilities.

- Comprehensive services, leveraging artificial intelligence (AI) across SAP monitoring and operations, so preventable P1s and P2s can be avoided, enabling a compelling SLA attainment.
- Innovation beyond SAP, including SAP-Centric Data Lake and Management enablement, and immediate access to new AWS releases and the latest SAP enhancements.
- Automation solutions for commonly executed activities to drive continuous service improvements.

### Lemongrass and AWS

Lemongrass has been working with AWS since 2010 as a Premier Consulting Partner in the AWS Partner Network (APN) and has AWS SAP Competency status. Lemongrass was also recently awarded the AWS Migration Competency designation, in addition to the AWS Managed Services Competency and AWS Well-Architected certifications, in recognition of the thousands of SAP systems that they have successfully migrated.

---

Lemongrass is a software-enabled services provider, synonymous with SAP on AWS, focused on delivering superior, highly automated Operate services, accelerating growth and profitability with robust, reusable migration pattern assets. Lemongrass specializes in the implementation, migration, operation, innovation, and automation of SAP on AWS. The company is an AWS Premier Consulting Partner, an AWS accredited Managed Service Provider and was the second company globally to achieve the AWS SAP Competency status.
