

How to Prepare for an SAP S/4HANA Implementation on Microsoft Azure

An SAP S/4HANA implementation is a large transformation project. The sheer size of the project can be overwhelming. This is typically the case when thorough planning and preparation hasn't been put in place. The big question then is: How does an organization prepare for a successful SAP S/4HANA implementation on Azure?

A good place to start is an SAP S/4HANA readiness assessment. The objective of a readiness assessment is to lay out the roadmap for your SAP S/4HANA journey. It presents an opportunity for you to assess your:

As-Is Scenario: How you currently run your business and manage your infrastructure

To-Be Scenario: How things will change as you move to SAP S/4HANA

Requirements: The planning of your transition, developing estimation models, and monitoring progress

Why is SAP S/4HANA Implementation Readiness Important?

A popular saying is that "Most people don't plan to fail, they fail to plan." This statement holds true for many SAP project failures. More often than not, project failure can be traced back to missteps and decisions that weren't made in the implementation readiness stage.

When you successfully execute the implementation readiness component of your SAP project, you realize the following benefits:

Resource Optimization

The more time and resources you spend upfront during the implementation readiness stage, the more smoothly executed your SAP S/4HANA project will be. You won't waste time and resources on things you could have addressed during implementation readiness.

Risk Mitigation

In an implementation readiness assessment, you get a bird's eye view of the entire SAP S/4HANA implementation project. This perspective gives you an opportunity to spot potential pitfalls and address them. If you can't address them during the readiness assessment, you can develop contingency plans.

Ensured Alignment

Having alignment from the executive team on project execution and detailed technological decisions is critical for success. The best time to ensure organizational alignment is during your SAP S/4HANA readiness assessment.

Conduct an SAP S/4HANA Readiness Assessment with Lemongrass

How you prepare your SAP S/4HANA implementation is critical to your success. You need a partner that understands business processes, the SAP user experience, technical architecture and Cloud offerings.

Lemongrass's SAP S/4HANA Readiness Assessment will provide you with a clear framework that covers all the areas involved in an SAP S/4HANA implementation on Microsoft Azure.

How It Works

Through a series of workshops aligning our SAP architects with your SAP team and end users, we assess your current position regarding your data, environment and user experience. The insights gleaned from these workshops along with our proven approach, will help determine how ready your organization is for SAP S/4HANA and identify key technical and business focus areas.

The 5 Pillars of SAP S/4HANA Readiness

Since all transformations are inherently personal, your SAP S/4HANA readiness assessment will be unique and tailored to your organizational vision and business needs. That being said, all SAP transformation projects have a similar framework. In an SAP S/4HANA Readiness Assessment, there is a framework that consists of 5 pillars. Each one of these pillars must be assessed and established in implementation readiness to mitigate risk and insure a successful SAP S/4HANA transformation.

The 5 pillars are:

1. Strategic and Executive Alignment

Before you undertake an SAP S/4HANA transformation, you need answers to big picture questions. Why are you undergoing this transformation? What do you plan to accomplish? Getting the answers to these kinds of questions is a critical component of establishing strategic and executive alignment because it brings clarity to the project and translates the executive vision into specific project goals and objectives.

2. Operational Readiness

As a transformative project, an SAP S/4HANA implementation will bring changes to how you run your business. This means you must make some strategic operational decisions. The best practice is to make these operational decisions prior to your implementation.

3. People Readiness

Your entire organization and the internal staff are essential transformation enablers. The object of establishing people readiness is to assess the skills and competences you currently have as an organization and what you will need going forward. Once your skills and competences are defined, a "Change Plan" and "Change Team" will be created to ensure your staff begins to prepare for upcoming changes.

4. Technical Readiness

This is where your infrastructure is assessed and a plan is put together on how you are going to decommission your legacy systems or migrate them over to SAP S/4HANA. The objective of technical readiness is to define the go live architecture and establish a data migration plan as well as data readiness.

5. Project Governance and Planning

The overall project implementation plan will be developed in this phase of SAP S/4HANA implementation readiness. The key objectives here is to establish the project working structure, define project organization, complete the project and resource plan, and define the approach for managing risk.
